## We all know the importance of preserving our vision.

Any one of us is at risk of developing an eye disease. You or someone you love or know may already have cataracts, macular degeneration, glaucoma, keratoconus, myopic degeneration, blood pressure or diabetes-related diseases, dry eye or eyes that water excessively, for example.

Detection of disease and disease progression are crucial to ensuring appropriate clinical management and preservation of long-term vision.

Much more research is needed but these efforts are being restricted by insufficient funding.

**Your generous support will increase research into ways to preserve vision and the gift of sight.**

Contributions are tax deductible.  
Please consider:

1. Making a donation now to the Vision Preservation Research Fund and/or
2. Bequeathing a part of your estate to the UNSW Vision Preservation Research Fund

These diseases reduce vision and the quality of life and can result in difficulty reading, driving and travelling without assistance, as well as problems with many other aspects of the loss of the ability to live independently.

Continuing research efforts are being made to find ways to preserve vision at the School of Optometry and Vision Science (University of New South Wales).

**Please complete the attached form to make a contribution.**

**Your gift will make a significant difference to the activities of the UNSW Vision Preservation Research Fund**

**Thank you for your support.**
